

LEOV
C O M P A N Y

Market

Leov Company is an export oriented company and during the years it has successfully developed the sales of its products on the markets in Austria, Italy, Greece, Poland, Sweden, Spain, Portugal, Albania, Turkey, Malta, Romania, Hungary, Serbia, Croatia, Slovenia, Bosnia and Herzegovina, Montenegro and Kosovo.

Today the company is among the three largest manufacturers of electric water heaters on the Balkans. All appliances made by Leov Company are in accordance with the requirements of the Quality standard ISO 9001: 2008 and meet the quality standards in accordance with the CE Norms, and also the electrical water heaters are in accordance with the CB Norms. The solar collectors are in accordance with the Solar Keymark Standard.

Leov Company's main priority, along with its partners, has always been the satisfaction of the end user; so by continuously investing in equipment and implementing the latest technologies in production, they offer highest quality products and safety in their exploitation.

Achievements

The confirmation of the successful operation and the high quality of the products is the international award for quality of the products received in Geneva, Switzerland in March 2004.

The high eco-standards are met in the operation of the cutting-edge production plants. This means that in the process of production, there are no emissions of hazardous substances which would be a danger to the environment and the human health. The achievements for the promotion of the protection of the environment are monitored constantly and are applied in the production process.

The work in accordance with ISO

9001:2008 and keeping the records of the quality of the input raw materials and components, the production phases and the finished products, as well as the regular maintenance and servicing of the production plants, guarantees a high level of eco-awareness.

History

LEOV COMPANY DOOEL is a limited liability company (sole proprietorship), from Veles, founded in 1984 with production of electrical appliances as its basic activity. It started off as a family

business, but today Leov Company has developed into one of the leading companies on the market.

The location of the production plant of Leov Company in Veles is in the industrial part of the city, in the central part of Macedonia, where all the important transport roads cross, enabling the continuous operation of the company. The excellent road infrastructure, the opportunity to communicate with the cargo vehicles and the proximity with the railway station with a cargo track in the circle of the company is of great advantage for delivering of the raw materials and transport of the finished products.

Product

The range of products of Leov Company is comprised of various household appliances such as: electric water heaters offered in a few models, with the opportunity for vertical and horizontal assembly, solar water heaters which can be assembled to perform the function indoors and outdoors, solar collectors for heating water with surface sizes of the absorber of 1,5 m²; 2 m²; 2,5 m², as well as U-type vacuum pipes, gas units, stainless steel pipes- grooved and even quartz heaters, junction boxes and components for all products.

Leov Company keeps expanding and increasing its range of products, and today the production range is comprised of electric water heaters from 5 to 500 liters, solar water heaters with a capacity of 100 to 500 liters, for indoor and outdoor use. The water heaters comprise the greater part of the production, even 80% which are export products, and the assortment and type of the products are developed in accordance with the market specifics and demands.

Recent Developments

The basic characteristics of the technological solutions which are applied in the production process of Leov Company are conditioned by the charac-

tees high quality of the welded tank.

The protection of the tanks is performed with the most modern and completely automated plant for shot-blasting, enameling and firing of the prepared tanks. This line was installed in 2002 and it is characterized with a strictly controlled quality process, the first of this type in the region and

teristics of the set technological production line.

On the automated line for confectioning and cutting of the sheets from a roll, crosswise and lengthwise, the necessary pieces are cut, according to the pattern, and they are directly placed in palettes and then forwarded to the following phases of production.

The pressing capacity is automated and all operations are performed from the roll of material directly into a mould.

The production line of the tank of the water heater is completely automated and every manufactured element in accordance with the set and demanded parameters of production, guaran-

one of the few in Europe with electrostatic layer of enameling.

The production plant for the outer of the water heater is also automated. The confectioned and perforated sheet, according to the determined dimensions is placed in the production line for the outer of the products. While on the line, it is shaped, punctured and flanged, and the ele-

ments prepared in this way are prepared for the protection on the automatic plant for electrostatic coating.

All other products are manufactured in cutting-edge production plants which are on the top of the production technology and guarantee high quality of the finished product.

Promotion

To confirm the ecological approach towards the projected goals in the production, the production of solar absorbers has been developed for hot water which is a comprising part of the solar collectors.

Two types of solar absorbers are being manufactured – an absorber for a collector with vacuum pipes and for a panel collector. The application for the latest absorber to catch the light enables production of very effective panel which fully transfers the absorbed light to the converter in transferred heat. The solar systems which come as a set with the solar water heaters, guarantee efficient savings of energy for water heating. They represent an ideal configuration for savings of the increasing cost of electricity and an investment which guarantees a quick return of the invested funds.

Leov Company is at the very top when it is a matter of technological readiness in terms of the European water heater manufacturers. For ten years now, it has operated with the cutting-edge production lines: cutting, pressing, welding, shot-blasting, and enameling. In addition to this, Leov Company is the first company from the Balkans to adopt the protection of steel with an electrostatic enameling.

Brand Values

The professional and business relationship of the company is distinguishable to all associates. The customers recognize it and demand the brand which has proven itself on all the markets, and the long-lasting tradition of buying the products is a success which leads the company to realization of bigger plans and new ideas.

The continued quality, the development of new products and the energy savings are evidence of the proper direction for strengthening of the position of the brand.
